

Welcome to Haus Steel Framing

Haus (house) Steel Framing is excited about the prospect of changing the way residential buildings are constructed. Our company is using the latest technology and equipment to efficiently manufacture steel studs and fabricate wall panels, floor trusses and roof trusses.

To start the process we strongly recommend that you hire an engineer or architect to draft your dream house. It is very important to have accurate plans, because our equipment is managed by a computerized system. You know the saying with computers “garbage in – garbage out”. We can not produce an accurate structure without accurate blueprints.

When your plan is completed we import or encode it to our FrameCAD software, which in turn tells our rollforming machine what to make and when to make it. As the studs are made our assembly staff will fabricate the walls and trusses.

We are looking forward to working with you and your contractor on your next project.

David Hauschild
